Emerging pathologies, medicinal plants and therapeutic research

Emerging pathologies / Medicinal plants / Therapeutic research

This area brings together emerging pathologies, medicinal plants and therapeutic research. It places health questions alongside biological resources within a research framework that requires evidence and systematic evaluation.

Illustrative research questions

- How do emerging health challenges connect to environmental context?
- How can research questions about medicinal plants and biological properties be framed?

Possible scientific connections

Possible connections include biochemistry, bioactive substances and bioinformatics. A description of this field does not establish therapeutic efficacy.
